EXAMINER'S AMENDMENT

An extension of time under 37 CFR 1.136(a) is required in order to make an examiner's amendment which places this application in condition for allowance. In the After Final reply filed 04/27/2010, Richard Berg noted authorization for any necessary extension of time, herein for 1 MONTH(S) and authorized the Director to charge Deposit Account No. 12-0415 the required fee for this extension and authorized the following examiner's amendment in an interview on 05/28/20140. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 22 at line 1 read:

"The method of claim 17 wherein the step of"

And is now to read:

- - - "The method of claim 38 wherein the step of" - - -

Claim 23 at line 1 read:

"The method of claim 17 wherein said spectrum of light"

And is now to read:

- - - "The method of claim 38 wherein said spectrum of light" - - -

Claim 38 read:

"A method of configuring a transmitter to transmit one of a plurality of wavelengths, said method comprising the steps of: passing a spectrum of light from a gain element into a tunable Fabry-Perot etalon or microdisk microresonator; selecting a first portion of said spectrum of light to be transmitted by said transmitter; and electrically tuning said tunable Fabry-Perot etalon or microdisk microresonator wherein a second portion of said spectrum of light is transmitted to a sampled grating fabricated in a silica waveguide for reflection back to said gain element; wherein said sampled grating has a sequence of Bragg reflectivity peaks and wherein a passband of the tunable Fabry-Perot etalon selects one of the peaks in said sequence of Bragg reflectivity peaks."

And is now to read:

- - - "A method of configuring a transmitter to transmit one of a plurality of wavelengths, said method comprising the steps of: passing a spectrum of light from a gain element into a tunable Fabry-Perot etalon or microdisk microresonator; selecting a first portion of said spectrum of light to be transmitted by said transmitter; and electrically tuning said tunable Fabry-Perot etalon or microdisk microresonator wherein a second portion of said spectrum of light is transmitted to a sampled grating fabricated in a silica waveguide for reflection back to said gain element; wherein said tunable Fabry-Perot etalon or said microdisk microresonator is of a body of material different than said silica waveguide; and wherein said sampled grating has a sequence of Bragg reflectivity peaks and wherein a passband of the tunable Fabry-Perot etalon or

microdisk microresonator selects one of the peaks in said sequence of Bragg reflectivity peaks." - - -

Response to Amendment

The Examiner acknowledges the amending of claims 19, 20, 27, 28, 30, 34-40, and the cancellation of claims 17, 29, and 33 in the after final amendment.

Allowable Subject Matter

Claims 1, 3-11, 13-16, 19-28, 30-32, and 34-41 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1 and 10 outline a laser transmitter with an integration platform with a silicon substrate, a gain element made of a material different than the platform and disposed on the platform, an optical waveguide of silica within the platform, a tunable microresonator of a material different than the silica waveguide on the platform, a second silica waveguide within the platform, and a fixed grating in the platform coupled with the second silica waveguide. Claims 26, 28, 30, 34, 36, and 38 further define the types of gain and microresonator material to be III-V type, the microresonators to be either Fabry-Perot etalons or microdisks, the grating to be sampled, and the grating reflectivity spectrum to align with the microresonator under electrical tuning such that only 1 peak in a sequence of Bragg reflectivity peaks is chosen. The prior art of record was found to teach similar devices but lacked detail such as the in/on and differing material limitations of claims 1/10, the material combinations of claims 26/28/30, and the single peak alignment under electrical tuning and material limitations of claims 34/36/38.

Other prior art such as US 2004/0136412 was found to teach related structure but failed to teach the proper material differences and usage of a disc vs. ring. The claims are therefor in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
